

RISHABH VERMA

Full Stack Developer — Java / Python / React

rishabhverma707@gmail.com — +91 7000797371 — Durg, Chhattisgarh, India — [linkedin.com/in/rishabhverma707](https://www.linkedin.com/in/rishabhverma707)
— github.com/wicktech

Summary

Full Stack Developer with **2+ years of experience** building production applications with **Java (Spring Boot), Python, and React**, spanning RESTful API design, database optimization, and end-to-end feature delivery. Currently at **Futureedge** building backend and automation software for credit unions and banks, eliminating 50% of manual operational overhead. Comfortable owning full-stack features across the development lifecycle — from frontend components in React to backend services in Java and Python — with a track record of clear technical documentation and cross-team collaboration in fast-moving, team-based environments. Pursuing an MS in Computer Science with a focus on engineering efficiency, reliability, and impact at scale.

Professional Experience

Futureedge · *Software Engineer*

May 2024 – Present

Remote / HQ: Pune, India

- Designed, tested, and documented **20+ RESTful API endpoints** using Postman, enforcing contract-first practices and achieving zero regression incidents post-deployment in production integrations.
- Architected and deployed **Robotic Process Automation (RPA) solutions** for credit unions and banks using Automation Anywhere, eliminating repetitive manual workflows and reducing operational burden by **50%** across client environments.
- Engineered end-to-end automation pipelines for financial data processing using **Python scripting** alongside RPA tooling, replacing error-prone manual entry with reliable, auditable software workflows.
- Delivered **internal training programs** on software development best practices, automation frameworks, and API design — improving team velocity and onboarding time for new engineers.
- Authored **comprehensive technical documentation** for automation processes, enabling seamless handoff, faster debugging, and cross-team maintainability.

BuyHatke · *Web Developer*

September 2023 – April 2024

Bangalore, India

- Developed and shipped **production-grade web application features** using JavaScript, React, and Node.js, contributing to both frontend interactivity and backend service logic in a high-traffic e-commerce product.
- Built and integrated **RESTful APIs** enabling reliable communication between frontend clients and backend services, reducing data-fetch latency through optimized endpoint design.
- Engineered **reusable React component library** with clean prop interfaces, reducing UI duplication and accelerating feature delivery across the product team.
- Participated in structured **code reviews**, testing cycles, and documentation sprints, maintaining code quality standards and reducing post-release defects.

InterGlobe Technology Solutions Pvt. Ltd. · *Process Associate*

March 2019 – June 2019

Pune, India

- Managed **multi-channel customer operations** (voice, email, chat) for airline reservation and ticketing workflows, consistently meeting SLA response targets.
- Handled reservations, re-bookings, and web check-in support with high accuracy while maintaining strong customer satisfaction scores in English and Hindi.

Technical Skills

Languages:	Java, Python, JavaScript (ES6+), C#, SQL, HTML5, CSS3
Backend:	Spring Boot, Node.js, Express.js, FastAPI, ASP.NET, RESTful API Design
Frontend:	React.js, Chart.js, Responsive Web Design, Component Architecture
Databases:	MySQL, PostgreSQL, relational schema design, query optimization
Testing & DevOps:	Postman, Git, GitHub, Docker, CI/CD (GitHub Actions), VS Code
Automation & RPA:	Automation Anywhere, UI Path, workflow scripting, process documentation
ML / Data Libraries:	NumPy, TensorFlow, PyTorch, Apache Maven
Soft Skills:	Technical documentation, cross-functional collaboration, training & mentorship

Projects

Lumen RAG — Production RAG Engine with Eval Harness · *Python, FastAPI*, github.com/wicktech/lumen-rag
Docker, GitHub Actions

- Built a **transparent Retrieval-Augmented Generation engine** featuring sentence-aware chunking, cosine vector search, and **hybrid reranking** (vector similarity + lexical overlap) — achieving deterministic, citation-enforced answers without requiring external API keys.
- Engineered a **formal evaluation harness** measuring Recall@k, Precision@k, MRR, nDCG@k, and hit-rate against labeled Q&A sets, treating retrieval quality as a first-class, measurable engineering property.
- Designed a **ports-and-adapters architecture** with swappable embedder, vector store, and reranker components; shipped three interfaces — Python library, CLI (Typer), and HTTP API (FastAPI) — within a single codebase.
- Maintained **14/14 passing tests** with full CI coverage via GitHub Actions and Docker-ready deployment, enabling reproducible, secret-free local development.

Nimbus AI — Full-Stack AI SaaS with Streaming Chat & Credit Billing · github.com/wicktech/nimbus-ai
TypeScript, Next.js 15, Prisma, Vercel AI SDK

- Built a **production-ready AI SaaS platform** with token-by-token streaming chat (Vercel AI SDK), compatible with OpenAI, Ollama, Groq, and Together AI endpoints, deployed via Docker and Vercel.
- Implemented an **append-only credit ledger** with atomic database transactions (Prisma + Postgres) ensuring wallets cannot go negative or drift from the ledger — validated by a dedicated unit test suite (Vitest).
- Secured the platform with **NextAuth v5 JWT sessions**, middleware-level route guards, and server-side session verification before any LLM token is consumed.
- Established a **GitHub Actions CI pipeline** (typecheck → test → build) with strict TypeScript enforcement, keeping the codebase production-grade and regression-free.

Autoflow — LLM-Powered Content Automation Pipeline · *Python, FastAPI, Docker*, github.com/wicktech/autoflow
GitHub Actions

- Designed a **declarative, plugin-based automation pipeline** (RSS → filter → deduplicate → LLM summarize → publish) configured entirely via YAML, directly applying RPA workflow design principles from professional experience at Futureedge.
- Implemented a **decorator-based plugin registry** (@source, @processor, @sink) enabling extensibility without modifying core pipeline logic; ships with Markdown, webhook, and Slack/Discord sinks out of the box.
- Built **stateful deduplication** via persistent content fingerprinting across scheduled runs, ensuring idempotent execution safe for unattended GitHub Actions deployment.
- Integrated **LLM summarization** (OpenAI-compatible) with a deterministic extractive fallback, maintaining full offline reproducibility for CI and testing environments.

Atlas — Global News & Market Sentiment Dashboard · *React, Node.js, Express, Chart.js*, github.com/wicktech/Atlas
Tailwind CSS

- Built a **full-stack real-time dashboard** aggregating global financial news, per-article sentiment scores, and market data (stocks + crypto) from GDELT, Alpha Vantage, and CoinGecko via a Node.js/Express backend with Server-Sent Events.
- Engineered a **resilient multi-source fallback system** that retains the last good data feed through upstream outages, ensuring the dashboard never renders a blank state in production.
- Delivered KPI sparklines, sentiment distribution charts, and asset drill-downs using **Chart.js with dynamic Tailwind theming**, deployed on Vercel with serverless API functions.

Education

Woolf University · *M.S. in Computer Science*

August 2025 – February 2027 *(In Progress)*

CSVT University · *B.Tech in Electrical & Electronics Engineering*

June 2014 – June 2019

- Durg, Chhattisgarh, India

Scaler Academy · *Data Science & Full Stack Developer Program*

June 2021 – June 2023

- Completed an intensive **industry-aligned software engineering curriculum** covering data structures & algorithms, system design (HLD/LLD), full-stack development, and engineering best practices with mentorship from senior industry engineers.

Certifications

- Data Structures & Algorithms
 - High & Low Level System Design
 - Embedded System Design
- Front-End Development
 - Back-End Development
 - Cyber Information Security
